Corrient:

a. On the whole, the statements about the Elektrik electrotechnic plant are considered credible; the location, however, does not seen chite accurate.

b. According to Mil. Ceo. Plan of LTTTTGRAD, position (1) slown on the sketch is that of the Max Colz Tachine Factory, producing printing machines, concrete mixers, etc.; and position (3) indicating the location of Section 3 of the plant is that of a motorcar remain shop. Aerial views show that, late in 1942, the building shown as Section (Part) 2 did not exist.

The Elektrik Plant is located north of the position shown on the sketch, but not on Pesochnaya Street. During the part the plant was producing electric relding machines and electric accessories for airplanes.

The electrotechnical plant Leninskaya iskra is located or Pesochnaya Street, west of lirov Street. It produced aircraft storage catteries during the war.

- c. The positions of the two plants "lektrik and Leninskaya Iskra, as well as the reported position of the plant "lektrik, have been shown in lanex 2.
- d. In the case of the radio device which has been compared with the ex-Cornan Frankfurt Gear, it is the question of a ground radio measuring device similar to the AA fire control equipment.
